

PRECLINICAL HUMAN MODEL

Seminar invitation:

Manage risk and build value in early clinical development

– A unique approach to integrate preclinical and clinical research

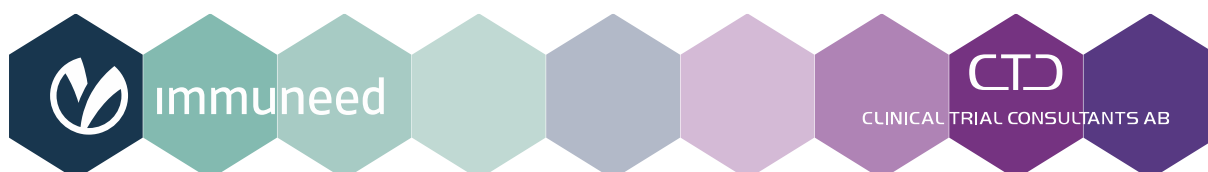

Location: Convendum, Valand, Kungssportsavenyn 21, Gothenburg

Date: 13th May, 2019

Moderator: Bengt Dahlström, Ph.D., Assoc. Professor

CSO and Chairman of the Board, CTC Clinical Trial Consultants AB

PRECLINICAL HUMAN MODEL

Agenda

08:15 **Breakfast**

08:30 **From pre-clinical progress to clinical failure: is there a need for new models?**

A poor success rate in clinical trials undermines the validity of the traditional pre-clinical models. Improving the current models and implementing more relevant human based assays is needed for pre-clinical data to become more clinically significant.

Justyna Leja Jarblad, COO, Immuneed AB

09:30 **First-in-Human studies, where safety comes first**

Solid and relevant pre-clinical data enable a profound risk mitigation strategy to minimise the risk of first-infusion reactions in your FIH study where the safety and wellbeing of the participating subjects are top priority.

Anders Millerhof, CEO, CTC Clinical Trial Consultants AB

10:00 **The whole blood loop system, a new tool for advanced ex-vivo characterization**

Pre-clinical characterization of biotherapeutics in physiologically relevant models prior to clinical studies is a key for better understanding of the function and safety risks of candidate drugs and to increase the likelihood of future clinical success.

Erika Fletcher, Head of Research, Immuneed AB

10:30 **Coffee break**

10:45 **Early Proof-of-Concept, build value in your clinical trial**

The combined expertise offered by CTC and Immuneed will support you in the design and conduct of your clinical trials. Early effect data may contribute to a significant increase in product value prior to Phase II.

Fredrik Hansson, Director Biometrics, CTC Clinical Trial Consultants AB

11:15 **Summary and closing**

Bengt Dahlström, CSO/Chairman of the Board, CTC Clinical Trial Consultants AB
